

So you got a new telescope, put it together, took it outside, pointed it up, and saw nothing. Unfortunately this is an all too common occurrence but one that is easily fixed. With just a little help, some patience, and a few pointers you will be viewing deep space objects with ease.

There are many objects in the sky you can view with just a small beginner's telescope and this book will show you where they are. From our moon to far away galaxies, from shimmering star clusters to wispy nebulae, here are the fifty easiest and most exciting objects you can view right now with your new telescope.

Don't get frustrated and return that telescope, grab a copy of 50 Amazing Things to See With Your New Telescope and start your exploration of the heavens tonight!

This book will:

- * Show you objects you can see with any beginner's telescope
- * Give you pointers on finding and viewing those objects
- * Provide links and suggestions for more information
- * Suggest where you can go after this book
- * And much much more
